Riverside Centre

project function

Supply and application of epoxy coating system suitable for vehicle traffic

SCOPE

Apollo CMS was engaged to rejuvenate one of Brisbane's most iconic commercial building's car park, which sets a new benchmark in meeting Australian Standards. Services performed include: extensive floor cleaning and preparation; application of grey epoxy coating for general driveway areas, and black epoxy coating for individual car bays and entry /exit ramps; and pedestrian and cycle friendly line markings.

CHALLENGES

The car park needed to be operational during the various stages of work to allow traffic movements and restaurants to access their storage and cold room areas.

Therefore, the majority of work was undertaken after hours with the utilisation of traffic control and security staff to assist with vehicle and pedestrian access.

RESULTS

The project demonstrates innovation and Apollo CMS' ability to work collaboratively with all parties involved to deliver an exceptional result for the client.
